Highlights

All current Crosswalk users who have Version 4.3 installed on their computers do not have to due a full software installation to begin FYO3 processing. All that is required is for you to download the two program files and your state database. The new features for FYO3 do not warrant a complete installation.

Features

Load Duplicates is an additional report that was added to the software that holds all duplicate data records that have the same fund, function, and object. With the inclusion of this report you will be able to evaluate those records for possible adjustment and inclusion into the dataset.

Understanding the Allocation Process is a new section that we have added to User Guide for FYO3. More and more respondents are asking more and more questions on how data distributions are setup and activated. It is a process that requires multiple tables to produce the desired result. This section delves into each table's structure and explains its layout and usefulness to achieve the distributed dollars to more than one category, function and/or object.

The **Allocation Prep Program** was developed to safeguard against errors in setting up allocation tables. It includes descriptive error message boxes for help in error solution, as well as, status boxes to remind you of errors or to ensure you that allocations ran without incident.

A **frequently asked question** section has been added to this manual for FYO3. This is an increasingly popular method of finding answers to commonly asked questions. It is a very beneficial method to problem solving and we are confident this will prove to eliminate many e-mails and calls for help.
